ABOUT REVINFOTECH AI

Revinfotech AI is a computer vision company that develops AI technology. We are adept at providing real-time solutions for Safety, Security, FinTech, Retail, Automotives, Traffic Control, Law Enforcement, National Intelligence, and Military. Our solutions make cameras smarter by extracting valuable data from high-resolution video streams and delivering back useful, easily digestible analytics. Revinfotech Technology is highly accurate, fast, scalable, secure, and customizable.

ABOUT VIDEO KYC

Know Your Customer (KYC); a good business practice, has become a legal and regulatory requirement with financial institutions around the world. It aims to reduce financial risks by preventing liability and money laundering among other money frauds. KYC helps to track and prevent sanctioned customers/investors in doing any illegitimate business. In India, with traditional KYC done largely through in-person verification (IPV), the costs tend to be very high, from Rs. 50/- per KYC to Rs. 500/-. The amendment released by the RBI to prevent money-laundering (Maintenance of Records) Rules, 2005, permits Video KYC, an alternate method of establishing the customer's identity, onboarding.

Face Match

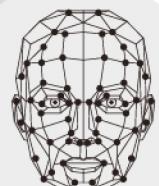

Face Match to verify the face of the person appearing in the video with the face in the government-issued IDs
